

Phatcharadanai Tangoan

Full Stack Developer — Next.js · React · TypeScript

ABOUT

I am a Computer Engineering graduate (2026) who builds full-stack web applications, and I am strongest on the frontend. I spent four months as a co-operative intern at Trinity Securities, a Thai securities firm, owning both the frontend and the backend of the internal tools I worked on. Since graduating I have shipped and deployed two applications end to end — a containerized Kanban board, and a real-time donation platform I wrote a WebSocket service for.

SKILLS

Languages

TypeScript, JavaScript, Python, SQL, HTML/CSS

Frontend

React, Next.js (App Router), Tailwind CSS, dnd-kit, Framer Motion, Recharts

Backend

Node.js, Next.js API Routes, Prisma ORM, NextAuth, REST APIs, JWT, WebSocket (ws)

Databases

PostgreSQL (Neon), MySQL, Redis

Testing

Vitest, GitHub Actions CI

DevOps & Tools

Docker (multi-stage), Git, GitHub

Actions, Railway, Vercel, Cloudflare R2

EDUCATION

Mae Fah Luang University

Bachelor of Engineering (Computer Engineering)
Graduated 2026 · GPA 3.45

LANGUAGES & OTHER

Thai — Native

English — Read technical documentation and English codebases daily.

Military service obligation completed (Ror Dor).

EXPERIENCE

Web Developer — Co-operative Internship

Jan – Apr 2026

Trinity Securities Co., Ltd. · Silom, Bangkok

- I built **Tickmatch** end to end — an internal tool tracking how many times a stock ticks upward during a trading day. Python backend ingests market data files and detects price changes; frontend serves a live table with Daily and 1-minute charts. **Redis** for the data pipeline and caching, **Docker** for a reproducible environment.
- I led the frontend of a stock **News Platform** (Next.js + TypeScript) — watchlists, Premium membership, real-time Telegram alerts — and built the initial backend API structure; the AI sentiment-analysis service was owned by a senior engineer.
- I delivered **Reweb Trinity**, a Next.js + TypeScript prototype redesigning the company website for a younger investor audience.

PROJECTS

DONATR — Streamer Donation Platform

Jul – Aug 2026 · [Live](#)

Next.js 16 · TypeScript · Node.js (ws) · Prisma · PostgreSQL · Omise · SlipOK · Azure Speech · Railway · Vercel

- I wrote the **WebSocket service** that pushes each donation to the streamer's **OBS**, with single-use 60-second tickets and its own reconnect.
- I settle payments in one **guarded update**, so a duplicate **Omise** webhook, a retry and my reconciler can race and still fire exactly one alert.
- I also verify real bank transfers from a slip through **SlipOK** in six layers. Matching four digits of a PromptPay number turned out not to be enough — a phone shop will sell you a number ending in whatever you ask for — so I check the receiver's name too.
- **Azure Speech** reads the message aloud, synthesised once and cached. The public demo takes no real money. **470 tests** in GitHub Actions.

Taskboard — Kanban Collaboration App

May – Jun 2026 · [Live](#) · [GitHub](#)

Next.js 16 · React · Prisma · PostgreSQL · Tailwind v4 · dnd-kit · Docker

- I folded a redundant access check into the main query, so a board loads in a **single JOIN** instead of several round-trips.
- I send uploads straight to **Cloudflare R2** through presigned URLs, and check size, filename and MIME on the server.
- I made sign-up atomic with a Prisma **\$transaction**, so the user and its one-time code are committed together or neither is. **NextAuth** for credentials, OTP and Google.
- I built drag-and-drop reordering with optimistic UI, plus checklists, comments, labels and due dates.
- I ship it as a multi-stage **Docker** image to Railway with Neon PostgreSQL, guarded by 28 **Vitest** tests in **GitHub Actions**.

Suicide Risk Surveillance System — Senior Project

[GitHub](#)

Next.js · PostgreSQL · Prisma · Python (scikit-learn) · Leaflet · Recharts

- This was a team project. A teammate owned the Random Forest model and I built the web app. A CSV upload runs a Python prediction script, and a **Leaflet** map shades each district by risk tier.
